Wireless LANs

14-1 IEEE 802.11

IEEE has defined the specifications for a wireless LAN, called IEEE 802.11, which covers the physical and data link layers.

Topics discussed in this section:

Architecture MAC Sublayer Physical Layer

A BSS without an AP is called an ad hoc network; a BSS with an AP is called an infrastructure network.

Table 14.1 Subfields in FC field

Field	Explanation			
Version	Current version is 0			
Туре	Type of information: management (00), control (01), or data (10)			
Subtype	Subtype of each type (see Table 14.2)			
To DS	Defined later			
From DS	Defined later			
More flag	When set to 1, means more fragments			
Retry	When set to 1, means retransmitted frame			
Pwr mgt	When set to 1, means station is in power management mode			
More data	When set to 1, means station has more data to send			
WEP	Wired equivalent privacy (encryption implemented)			
Rsvd	Reserved

Subtype	Meaning
1011	Request to send (RTS)
1100	Clear to send (CTS)
1101	Acknowledgment (ACK)

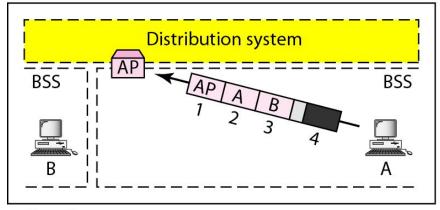

Table 14.3 Addresses

To DS	From DS	Address 1	Address 2	Address 3	Address 4
0	0	Destination	Source	BSS ID	N/A
0	1	Destination	Sending AP	Source	N/A
1	0	Receiving AP	Source	Destination	N/A
1	1	Receiving AP	Sending AP	Destination	Source

Figure 14.10 Hidden station problem

B and C are hidden from each other with respect to A.

The CTS frame in CSMA/CA handshake can prevent collision from a hidden station.

C is exposed to transmission from A to B.
